

Experiment 2 — Zoho Creator Setup and Platform Exploration

Aim

To create a Zoho Creator application and explore its basic development environment and features.

Procedure

1. Open Zoho Creator and sign in.
2. Create a new application.
3. Provide an application name.
4. Explore the application development environment.
5. Create and configure forms using the Form Builder.
6. Explore reports for displaying submitted records.
7. Explore workflows for automating actions.
8. Preview the application and test the created components.

Main Components Explored

- **Forms** – Used to collect and store data.
- **Reports** – Used to display and filter records.
- **Pages** – Used to create application interfaces.
- **Workflows** – Used to automate actions.
- **Deluge** – Used for custom logic and automation.
- **Integrations** – Used to connect external services.
