

Experiment 5 — Reports, Dashboards, and UI Builder

Aim

To create reports, dashboards, and user interfaces in Zoho Creator for displaying and managing application data.

Introduction

Zoho Creator provides **Reports** to display stored records and **Pages/UI Builder** to create interactive application interfaces. Reports help users view, search, filter, and analyze submitted data, while the UI Builder helps organize application components into a user-friendly interface.

Reports

Reports are used to display records submitted through forms.

Common report types include:

- List Report
- Summary Report
- Spreadsheet Report
- Calendar Report
- Chart Report

For the **Vehicle Service Request** application, create:

Report Name: Service_Request_Report

It should display submitted service requests and allow the service center to filter requests based on details such as **Service Type** and **Preferred Service Date**. This is specifically required in the assignment.

6ee4e4cb-b96f-4cdc-ae69-d181681...

Dashboard

A dashboard can provide a quick overview of important information using components such as:

- Total service requests
- Pending requests

- Service requests by type
- Requests by preferred date

UI Builder

The UI Builder can be used to arrange forms, reports, buttons, and other components into a user-friendly application interface.

Procedure

1. Open the Zoho Creator application.
2. Create the Service_Request_Report.
3. Select the required fields to display.
4. Configure filtering and sorting options.
5. Create a page using the UI Builder.
6. Add the required report and application components.
7. Preview and test the interface.

Result

The **Service_Request_Report** was created to display and manage submitted vehicle service requests, and the UI Builder was explored for creating a user-friendly application interface.
